

Generative AI: A big bloody elephant

Part I:

The elephant in the room

The elephant: generative AI

- Tools like **ChatGPT**, DALL-E — but also much **wider**
- Can generate and edit text, video, audio, images of **popes in puffer jackets**, etc.
- **Custom tools** focus on documents, code, search etc.
- **Subset of wider field of AI** that includes machine learning (ML), NLP, and other horrible acronyms
- **Separate** to AI-based decision making/algorithms

“I would guess that
90% of content will
be generated by bots”

Latanya Sweeney, [Harvard](#)
[Professor of the Practice of](#)
[Government and Technology](#)

“Shadow AI”

“Algorithm aversion”

People using AI outside/in absence of organisational systems and guidelines
A human bias against algorithms which can lead to more negative results, e.g. crashes, misdiagnoses

**“Those working against
[our] mission will be using
AI to increase their impact
and so on, so we need to
wise up quickly.”**

Three aims:

1. To (begin to) understand how generative AI **works** (and what risks are involved)
2. Identify and prioritise the biggest **concerns and aims** around generative AI (and work towards guidelines)
3. Identify and (begin to) answer **questions**

1. Make a list.

As an individual...

- As an individual: make a list of your **concerns** about AI, and any hopes for **problems** it might help you to tackle, or new **opportunities** it might make possible.
- In a group, use a flipchart to compile your lists into a **mind map** that connects related themes

2. FAQ.

Let's answer some questions

- What questions can we answer now? For example:
 - *How does it work?*
 - *What are the risks?*

(We've got further sessions to work through the detail)

Head, hand and heart

- Head statements are about **facts**
- Hand statements are about **practicalities**
- Heart statements are about **meaning**

For example:

♥ “I’m worried about AI’s impact on the environment”

🧠 “How big is the environmental impact of using AI?”

👉 “How do I reduce the environmental impact of using AI?”

🧠 “I don’t know how AI works”

♥ “We shouldn’t replace humans with AI”

Make a list...

- Start a new (horizontal) flipchart with three columns:
head, hand, and 'heart/neither'
- Turn your themes into **statements or questions** so that they fit in one of the three columns.

Make a list...

- Start a new (horizontal) flipchart with three columns:
head, hand, and 'heart/neither'
- Turn your themes into **statements or questions** so that they fit in one of the three columns.
- Take statements in one column and **re-phrase them to fill in the neighbouring columns**

3. Prioritise.

Prioritise

- Discuss which three statements you feel are the **most important**.
- Decide on a **top three**
- (The quickest way is for each member to **vote** for your top 3 individually and add up the points)
- **Share** them

Questions?
